**DETAILED ACTION**

***Election/Restrictions***

1. This application is in condition for allowance except for the presence of claims 25-28 directed to a system and method for driving an image sensor and processing/displaying images output from the image sensor non-elected without traverse. Accordingly, claims 25-28 have been cancelled.

***Allowable Subject Matter***

2. Claims 1-24 and 30-33 are allowed.

3. The following is an examiner's statement of reasons for allowance: While the prior art discloses miniature camera heads including conductive leads emanating from an image sensor, an object lens, circuitry and conductive wires linked to the circuitry and leads to provide power and electrical signals, the prior art does not teach or fairly suggest conductive wires wherein at least some of the wires are connected directly to the conductive leads and directly to each other, and some of the conductive leads are connected directly to the circuitry components without the use of a printed circuit board as claimed. Ito et al. (US 6,142,930) discloses bent conductive leads (Figure 1, Item 23), circuitry components (Figure 14, Item 161) and conductive wires (Figure 14, Item 163), however, the conductive wires and leads are all directly connected to a printed circuit board (Figure 14, Item 162). Soltyk (US 6,635,865; Figures 1-3), Higuma et al. (US 6,547,721; Figure 3), Minami (US 5,365,268; Figure 1) and Miyashita et al. (US

Art Unit: 2622

6,567,115; Figure 3) all disclose similar camera heads to Ito with conductive leads and conductive wires which are connected directly to a printed circuit board.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
